Appl. No.

10/661,853

Filed

: September 12, 2003

IN THE SPECIFICATION:

Please amend the following paragraphs as indicated:

[0095] Advantageously, the configuration of the gaming machine permits the machine

to have a slant top configuration but at the same time have substantially reduced dimensions

compared to other slant type gaming machines. In one embodiment, the configuration permits the

depth of the machine (from the front of the bumper to the rear wall) to be less than the depth of the

machine (from side-to-side) in a similar fashion to gaming machines disclosed in U.S. Patent

Application Serial No. 10/253,151, now U.S. Patent No. 6,860,814 10/253,621. In one embodiment,

the gaming machine is about twenty-six (26) inches in depth and about twenty-eight (28) inches in

width.

[0102] As described above, various features of the invention may be applied to gaming

machines having other configurations. For example, the rotating or "flip down" bezel and display

configuration may be applied to an upright gaming machine, such as of the type illustrated in U.S.

Patent Application Serial No. 10/621,740 10/253,621 incorporated herein in its entirety by reference.

That application illustrates an upright type gaming machine in which a display is mounted to a door

thereof. In accordance with the invention, the display of the upright gaming machine may be

mounted for rotation relative to the door, permitting access to the interior of the gaming machine
